# U.S. Equity Markets

- The small-cap oriented Russell 2000 index outperformed over Q3 2025, rising by 12.4%. Meanwhile, the tech-heavy NASDAQ Composite Index rose by 11.4%.
- According to FactSet data, a record-high number of S&P 500 Technology Companies have issued positive earnings guidance for the third quarter of 2025.
- According to the final estimates, the U.S. economy grew at an annualized rate of 3.8% in Q2 2025. This figure surpasses both the second estimate of 3.3% and the initial projection of 3.0%. In contrast, growth for Q1 2025 was revised downward to -0.6%, compared to the previously reported -0.5%. The expansion in GDP during the second quarter was primarily driven by increased consumer spending and a reduction in imports.
- The Federal Open Market Committee (FOMC) has projected a GDP growth of 1.6% for 2025, higher than June’s projection of 1.4%, while PCE inflation is maintained at 3.0% for this year.
- The Russell 3000 Index rose 8.2% during the third quarter and by 14.4% on a YTD basis. Technology (14.5%) and Materials & Processing (8.8%) were the best performers, while Consumer Staples (-2.2%) and Real Estate (3.5%) were the worst performers.
- On a style basis, growth outperformed value in the Large-cap segment, while value outperformed growth in the medium and small market capitalizations over the quarter. Small-cap stocks outperformed Large and Medium-cap stocks in both growth style as well as value style.

## Other Terms & Descriptions

### **Rank**

A representation of the percentile position of the performance of a given portfolio, relative to a universe of similar funds. For example, a rank of 25 for a given manager indicates outperformance, by that manager, of 75% of other Funds in that universe.

### **Universe**

A distribution of the returns achieved by a group of funds with similar investment objectives.

### **Ratio of Cumulative Wealth**

An illustration of a portfolio's cumulative, unannualized performance relative to that of its benchmark. An upward sloping line indicates fund outperformance. Conversely, a downward sloping line indicates underperformance by the fund. A flat line is indicative of benchmark-like performance.

### **Risk-Return**

The horizontal axis, annualized standard deviation, is a statistical measure of risk, or the volatility of returns. The vertical axis is the annualized rate of return. As most investors generally prefer less risk to more risk and always prefer greater returns, the upper left corner of the graph is the most attractive place to be. The line on this exhibit represents the risk and return trade-offs associated with market portfolios, or index funds.

# Notes

- The rates of return contained in this report are shown on an after-fees basis unless otherwise noted. They are geometric and time-weighted. Returns for periods longer than one year are annualized.
- Universe percentiles are based upon an ordering system in which 1 is the best ranking and 100 is the worst ranking.
- Due to rounding throughout the report, percentage totals displayed may not sum to 100%. Additionally, individual fund totals in dollar terms may not sum to the plan total.

# Disclaimer

## **Past performance is not necessarily indicative of future results.**

Unless otherwise noted, performance returns presented reflect the respective fund's performance as indicated. Returns may be presented on a before-fees basis (gross) or after-fees basis (net). After-fee performance is net of each respective sub-advisors' investment management fees and include the reinvestment of dividends and interest as indicated on the notes page within this report or on the asset allocation and performance summary pages. Actual returns may be reduced by Aon Investments' investment advisory fees or other trust payable expenses you may incur as a client. Aon Investments' advisory fees are described in Form ADV Part 2A. Portfolio performance, characteristics and volatility also may differ from the benchmark(s) shown.
