- Global equity markets rose over Q4 2025. The MSCI AC World ex-U.S. IMI index rose by 4.8% over the quarter, outperforming the MSCI AC World IMI index, which rose 3.2%.
- The quarter was marked by a 43-day long U.S. government shutdown, resulting in employee furloughs (later reinstated), delayed economic data and SNAP payments, and airline disruptions, before ending with a bipartisan deal. Democratic wins in key regional elections also heightened concerns about President Trump's economic agenda ahead of the 2026 mid-term elections. U.S. and China agreed to pause tariff hikes for one year.
- Market volatility remained largely subdued, with the CBOE Volatility Index (VIX) concluding the quarter at 15.0, which is below its 20-year average of 19.4.
- USA IMI equities rose by 2.3% over the quarter, underperforming most of its global peers. USA IMI equities were the worst performer on a YTD basis.
- Across international markets, all regions posted positive returns over Q4 2025, except for the Pacific ex-Japan IMI equities which delivered no returns. Israel IMI equities outperformed with a return of 10.9%, followed by Canadian IMI (8.1%).

Other Terms & Descriptions

Rank

A representation of the percentile position of the performance of a given portfolio, relative to a universe of similar funds. For example, a rank of 25 for a given manager indicates outperformance, by that manager, of 75% of other Funds in that universe.

Universe

A distribution of the returns achieved by a group of funds with similar investment objectives.

Ratio of Cumulative Wealth

An illustration of a portfolio's cumulative, unannualized performance relative to that of its benchmark. An upward sloping line indicates fund outperformance. Conversely, a downward sloping line indicates underperformance by the fund. A flat line is indicative of benchmark-like performance.

Risk-Return

The horizontal axis, annualized standard deviation, is a statistical measure of risk, or the volatility of returns. The vertical axis is the annualized rate of return. As most investors generally prefer less risk to more risk and always prefer greater returns, the upper left corner of the graph is the most attractive place to be. The line on this exhibit represents the risk and return trade-offs associated with market portfolios, or index funds.

Notes

- The rates of return contained in this report are shown on an after-fees basis unless otherwise noted. They are geometric and time-weighted. Returns for periods longer than one year are annualized.
- Universe percentiles are based upon an ordering system in which 1 is the best ranking and 100 is the worst ranking.
- Due to rounding throughout the report, percentage totals displayed may not sum to 100%. Additionally, individual fund totals in dollar terms may not sum to the plan total.

Disclaimer

Past performance is not necessarily indicative of future results.
